# The Paper Shortage

and

War Conditions generally compel us this season to send out an abridged Catalogue and to refer our friends to our 1918 Catalogue for descriptions of the numerous varieties of seeds listed.

If the 1918 Catalogue has been mislaid, kindly write for another.

Flower Seeds, Bulbs and Ornamental Plants, etc., will be listed in a separate booklet which we shall be pleased to send on request.

We hope also to issue a special Catalogue of Implements later in the season and shall be glad to register addresses for this to be sent to when issued.

In the Spring we may also be able to issue a revised list of Maize, Millets and other Spring Crops and shall be pleased to send it to all who send their addresses in advance.

Thank You! for your past support.

We hope to serve your interests as well or better in the future.

## The "Norcross" No. 55 5-Prong Cultivator-Hoe

The "**Norcross**" 5-Prong Cultivator-Hoe is the product of years of experience in the exclusive manufacture of this special type of garden implement.

It is a fact that if the soil is cultivated in a proper manner weeds will have absolutely no chance to sprout. Also that the proper stirring of the soil prevents evaporation of the valuable soil moisture which feeds and gives life to growing plants.

"**Norcross**" Cultivator-Hoes and Weeders are like a human hand, the fingers of which work carefully around the delicate plants very closely without injuring them, stirring the soil to any depth and leaving it level and loose without a footprint upon it. The middle prong is often removed and rows straddled. No other type of garden tool embraces so many features. Price 7/6 each.

## The "Norcross" No. 33 3-Prong Cultivator-Hoe

The "**Norcross**" 3-prong Cultivator-Hoe is a modification in size, weight and price of the well-known 5-prong tool. It has same length handle (of smaller size, three prongs instead of five), and weighs only 2 lbs. complete.

The prongs are detachable in the same manner and the quality and finish is the same high grade.

This tool has the advantage of cultivating between very narrow rows (such as are found in small home gardens), and being of light weight it is a "winner" with the thousands of women who tend small gardens or any one who prefers a light-weight tool.

A further advantage is that it competes in price with the common hoe, surpassing it many times in practical value as a garden implement. Price 5/6 each.
